

Slalom AI Acceptable Use Policy

UPDATED OCTOBER 2025

At Slalom, we recognize the transformative potential of Artificial Intelligence (AI) (including Generative AI) in shaping the future of business, technology, and humanity. We have a responsibility to our employees, clients, and communities to harness the power of AI in an ethical, legal, and responsible manner. This policy outlines the following:

- Slalom's Responsible AI Principles and Commitments
- AI Risks & Risk Mitigation
- Guidelines for Use of AI at Slalom: Overview
- Guidelines for Use of AI at Slalom: Internal Slalom Work
- Guidelines for Use of AI at Slalom: Client Delivery Work
- Internal Governance and Oversight

By adhering to the principles, guidelines, and commitments outlined in this policy, we aim to be leaders in the responsible use, development, and deployment of AI technologies, contributing to a future where AI serves the common good and enriches the lives of all individuals and communities.

SLALOM'S RESPONSIBLE AI PRINCIPLES AND COMMITMENTS

Slalom is committed to the responsible use, development, and deployment of AI technologies. The following Responsible AI Principles are foundational to our approach to AI:

1. AI for All, A Human-Centric Approach –

- **Human-Centric:** Slalom has long been a champion for a human-centric approach to AI. We believe that all AI initiatives should be designed to augment human capabilities, promote inclusivity, and enhance the well-being of individuals and communities.
- **Ethical:** We prioritize ethical considerations in all AI-related activities, ensuring that our solutions uphold human rights, fairness, transparency, and accountability.
- **Equitable:** We strive to mitigate biases in AI systems by promoting diversity, equity, and inclusion in our workforce, data collection processes, and algorithmic decision-making.
- **AI for Good:** We will leverage AI for social good, undertaking initiatives that address societal challenges, promote sustainability, and foster inclusive economic development.

2. Privacy and Data Security –

- **Security & Privacy First:** It is critical that we are industry leaders when it comes to incorporating best-in-class privacy and data security practices and thought leadership into our usage and implementation of AI solutions.
 - **Consent:** We will seek informed consent from individuals and our clients when collecting and processing their data for AI purposes, ensuring transparency about data usage and enabling individuals and clients to make informed decisions.
 - **Governance:** We will establish robust data governance frameworks to ensure the responsible collection, storage, sharing, and usage of data in AI initiatives, adhering to data minimization and anonymization principles.
- 3. Legal Compliance –**
- a. **Legal and Regulatory Compliance:** We are all responsible for developing a deep understanding of applicable laws, regulations, and industry standards governing the development and deployment of AI technologies and proactively adapt our practices to evolving legal and regulatory landscapes.
 - b. **Respect for Intellectual Property Rights:** We respect third-party intellectual property rights, and our solutions will be developed with due regard to existing third-party patents, copyrights, and proprietary information in the data processed.
- 4. Transparency –** We will be transparent about the use of AI technologies, including any inherent limitations and how they should be responsibly used.
- 5. Continuous Monitoring –** We will implement systems for continuous monitoring and evaluation of AI solutions post-deployment, regularly assessing their performance, fairness, and impacts on stakeholders.
- 6. Capacity Building –** We will invest in training and upskilling our workforce to foster AI literacy, ethical awareness, and responsible AI practices across the organization.

AI RISKS & RISK MITIGATION

It is important that we all understand some of the inherent risks and limitations of AI (including Generative AI) systems.

- **Confidentiality –** Understand how data we input into a tool may be used by a third party to train models, improve services, and generate future content for other users. We need to protect Slalom and client confidential information, personal information, and other sensitive data.
- **Security Risks –** There are several cyber & data security risks to consider, including, but not limited to:
 - If the AI platform is not secure, it could pose a security risk to Slalom or client systems, devices, and data. For example, if the output from the AI platform includes malware or links to 3rd party site-hosted malware, and the output is not reviewed before use or execution, this could result in an incident.
 - The AI tool's output, especially code samples, could contain security flaws.
 - The speed and quality of content generation opens the door to more believable phishing emails or simple exploit code generation. This requires employees to be more vigilant in protecting against AI-generated phishing attacks and to exercise good security practices when assessing new tools and technologies.
- **Intellectual Property –**

- **Training Data** – If we are developing or training AI models, we should be doing so only with data we have a right to use for such purpose.
- **Loss of Trade Secret Protection** – A disclosure of confidential trade secret information to an AI tool without appropriate safeguards in place may result in Slalom or one of our clients losing valuable trade secret protection of such information.
- **Lack of Ownership / Proprietary Rights** – The current laws in most jurisdictions do not extend valuable intellectual property rights (including copyright protection) to outputs created by AI. This may deviate from our contractual requirements with our clients, or it may be important for our clients to understand the potential trade-offs.
- **Increased IP Infringement Risk** – There is an increased risk that content created by AI may infringe third-party intellectual property rights of the content on which the model was trained.
- **Commercial Usage Rights & Limitations** – Some AI vendors may impose restrictions on the ability to use outputs for commercial purposes. We must understand the terms and conditions of these tools to understand whether we are gaining ownership over outputs or a limited license, and whether such output is subject to usage restrictions.
- **Quality Control Issues** – The outputs of AI (including Generative AI) may not always be accurate or reliable. Most Generative AI tools are not working from a single, verified source of truth; rather, they are making educated guesses based on a massive amount of information. While many results are incredibly impressive, many examples of results are wildly inaccurate or nonsensical. Additionally, the model's ability to generate human-like responses can sometimes create a false sense of intelligence, leading users to overestimate its capabilities. It is essential for users to be aware of this and to take steps to mitigate such issues. We should ensure that Slalom and our clients are thoughtful about these risks and consider potential ways to mitigate them. We should always review generated content for accuracy, unintended bias, and completeness, including proper testing and quality assurance review where appropriate.
- **Ethical & Equity Considerations** – It is critical that humans are always in the loop to continuously evaluate the use, development, and deployment of AI solutions to proactively mitigate risks of bias, inequity, or unethical behavior.
- **Regulatory Compliance** – Many global government entities are focused on AI, and developing policy and guidance around how AI should be regulated. We need to pay careful attention to what laws and regulations may apply to our or a client's use of AI.
- **Client Permission** – Clients may have policies that limit or expressly forbid the use of AI (including Generative AI) tools. If we are using AI in a client environment, or if we are using AI to process client data or develop client deliverables, we need to make sure we're complying with our clients' policies.

GUIDELINES FOR USE OF AI AT SLALOM: OVERVIEW

1. Do not enter Slalom or client confidential, proprietary, or sensitive information (including source code) into any AI tool unless otherwise approved by this policy

- When interacting with an AI or Generative AI system, you should treat it as though you are sharing information with someone who does not work for Slalom and exercise the same degree of caution regarding Slalom and client information as you would in any other interaction. This applies while using personal, Slalom or client-issued devices and technology.
- See “[Slalom Authorized Tools](#)” section below for a list of tools that are authorized to process Slalom Confidential Information.

2. Exercise Caution & Review AI-Generated Content for Accuracy, Bias, and Completeness

- This technology is still under development, and content generated by AI should be reviewed carefully by you and at least one other peer.
- In addition, understand that Generative AI and LLMs lack a mechanism to help determine whether the content is trustworthy and should only be used to generate draft versions of content that require Slalom peer review before completing final deliverables.

3. Review the Terms & Conditions and Privacy Policies of Third-Party AI Tools

- Understand how the tool trains the model using user information, inputs, and outputs. Understand whether there are restrictions on commercial use. Understand if different tiers of users receive different levels of protection (e.g., free vs. paid, individual vs. enterprise). If you have questions, please submit a request to the Legal team for assistance reviewing these terms at legal.slalom.com.

4. Leverage secure Software Development Lifecycle (SDLC) best practices when using Generative AI for generating code.

- When generating new code or leveraging code analysis capability, follow the code review processes that we already have in place on delivery teams and are referred to in our Secure Build policies:
 - The engineer must read and understand all lines of code before running on any Slalom or client-controlled machine.
 - Code must undergo automated security scanning as part of the SDLC to prevent vulnerabilities and attacks.
 - Code must be peer-reviewed through a code-review process.
 - The engineer must be prepared to answer any questions about the code during a pull request review, including what specific lines of code do, why they are there, and the source of where they obtained the code.
 - Any connections to external systems in the code are explicitly called out, explained, and justified.
 - The engineer will have the same knowledge and understanding of all code as if they wrote it themselves, regardless of the source.

5. Slalom-Authorized Tools:

- You may use an approved generative AI coding tool (e.g., GitHub Copilot, AWS CodeWhisperer) requiring contextual code if authorized by your client and Slalom.
- The following tools have been approved to process Slalom Confidential Information within Slalom’s technology environment, provided appropriate security controls have been put into place to (i) limit transfer of any Slalom Confidential Information outside of a Slalom secured environment, (ii) limit training of an external (i.e., non-Slalom specific) model using Slalom Confidential Information, and (iii) ensure persona or user-based access controls are in place to limit access to the Slalom Confidential Information to only those who have a need to know such

information (e.g., sensitive financial data processed by Microsoft 365 Copilot for members of the Finance team should not be available to Microsoft 365 Copilot users outside of that team who would not otherwise have access to this information) :

- Microsoft 365 Copilot (Slalom Production Tenant; includes copilot.microsoft.com when accessed with Slalom credentials)
- Microsoft Azure OpenAI (Slalom Production Tenant)
- Duet AI for Google Workspace (Slalom Production Tenant)
- GitHub Copilot (Slalom Production Tenant)
- OpenAI ChatGPT Enterprise (Slalom Enrolled Accounts)
- Miro Assist (Slalom Production Tenant)
- Lucid Collaborative AI (Slalom Production Tenant)

GUIDELINES FOR USE OF AI AT SLALOM: INTERNAL SLALOM WORK

In addition to the guidelines outlined in the “[Guidelines for Use of AI at Slalom: Overview](#)” section above, the following guidelines apply to use of AI for internal Slalom work:

1. Use of Generative AI for Slalom Marketing or Creative Asset Generation:

- a. Do:
 - i. Add any required disclaimers to the creative output per the tool’s terms & conditions.
- b. Do Not:
 - i. Upload Slalom-owned creative or visual assets, including but not limited to Slalom logo(s), partner logo(s), Slalom photography (including employee photography, headshots, event photography). Uploading images or logos into open-source databases may grant broad licenses to the service provider to use that content for future customers.
 - ii. Upload client-owned creative or visual assets including but not limited to client logo(s) and photography, unless otherwise approved in the statement of work (SOW).
 - iii. Upload stock photography, even if you have the appropriate license to use the photograph.
 - iv. Prompt the tool to create the likeness of any word, phrase, symbol, design, or persons that may be trademarked or otherwise protected (including the likeness of celebrities or known persons).
 - v. Prompt the tool to reference any works, style, design, asset, or other work that may be protected under copyright, trademark, or trade dress.
- c. When using a creative asset created by a Generative AI tool for Slalom marketing or promotional purposes:
 - i. Only generate assets that are aligned with [Slalom visual brand guidelines](#).
 - ii. Use a Slalom-supported visual design tool, such as Adobe Suite or Canva, to manually edit the output.
 - iii. Always add the Slalom logo to the output.
 - iv. Insert the following footer to your output: *Created by Slalom humans using AI*

GUIDELINES FOR USE OF AI AT SLALOM: CLIENT DELIVERY WORK

In addition to the guidelines outlined in the “[Guidelines for Use of AI at Slalom: Overview](#)” section above, the following guidelines apply to use of AI for client delivery work:

1. **Obtain express, written consent from our clients prior to using AI / Generative AI to process client data or develop project deliverables.** If our client expects to receive intellectual property ownership or protection over a specific deliverable, we need to make sure we are delivering in a way that allows them to receive that protection under current law. For questions or legal support, please submit a request to legal.slalom.com.
2. **Ensure our SOWs with clients reflect our intended use of AI tools.** We should be transparent about our intended use to ensure we comply with applicable client policies and prompt important conversations around data usage, security, and intellectual property. [Model SOW language can be found here](#).

GUIDELINES FOR USE OF AI AT SLALOM: Employees and Candidates

In addition to the guidelines outlined in the “[Guidelines for Use of AI at Slalom: Overview](#)” section above, the following guidelines apply to use of AI for employee or candidate related matters:

1. **Automated decision making is prohibited.** Any use of AI / Generative AI in the recruitment process or in current employee matters (e.g. candidate evaluations, employee reviews, etc.) must include substantial human oversight. Slalom does not engage in any automated decision making in the candidate or employee context.
2. **Approved AI tools may be used to assist with notetaking and summaries.** Only authorized AI tools may be used and only for specific use case(s) in which it was authorized. Any new tools or new use cases should be brought to the attention of Legal-Privacy (privacy@slalom.com), Legal-Employment (legalemployment@slalom.com) and Compliance for review.
3. **Examples of permitted uses:**
 - Note-taking
 - Summaries of conversations and meetings
 - Employee self-reflections
4. **Examples of impermissible uses:**
 - Performance evaluation snapshots
 - Using AI to replace discretionary decision making
 - Use of keyword-driven resume screening

INTERNAL GOVERNANCE AND OVERSIGHT

This AI Acceptable Use Policy is foundational to Slalom’s use, development, and deployment of AI technologies, and will be integrated into our solution development processes and upheld by all teams across the organization. The Slalom AI Internal Governance Steering Committee will oversee

compliance with this policy and provide guidance and support to teams as needed.

Team members whose conduct is found in violation of this policy will be subject to disciplinary action, up to and including termination.

Exceptions to this policy must be documented and approved by Slalom Information Security & Governance via security@slalom.com.
